

Common Questions...

1. Are lead manufacturers codes, lengths & widths the same?

We all manufacture the same standard lengths & widths in codes 3-8, however, Midland Lead are also able to manufacture codes 1 & 2. The only difference is that Midland Lead still work in half kilos which means some roll weights differ to other manufacturers.

2. Can you weld with cast lead?

Yes, make sure the lead is clean beforehand and you have the correct flame temperature.

3. Does cast & rolled lead look the same?

All lead manufacturers finished product has a slightly different finish. However, once the lead has been installed and treated with Patination Oil they are all very similar.

4. Does cast & rolled lead do the same job?

Yes, both products are used for roofing, radiation shielding and sound proofing.
