

DECKING/CLADDING FRAME

Composite Structural Joist 4m

Making sure you begin your project in the right way is crucial, and our Structural Composite Joists will do exactly that, enabling you to place your Decking or Cladding Boards in the right way. Ideally placed onto a concrete base underneath, these Structural Composite Decking Joists will ensure that everything is correctly positioned and crucially give a strong foundation for your project.

Produced from recycled woodfibres and recycled plastic, and measuring 4000mm x 100mm x 50mm, Structural Composite Joists are available in charcoal colour only. Using Cladco Composite Joists will help to lay the foundations for the rest of your Composite Decking project to be fitted on top.

Decking Support You Can Trust

Structural Composite Joists can be used for elevated Decking areas, and you can also place Structural Composite Joists directly onto grass if a solid concrete base isn't an option. These are designed to ensure hard-wearing and long-lasting support for many years.

SPECIFICATIONS	
Each Joist measures	4000mm x 100mm x 50mm
Each Joist weighs approximately	17.24kg

We recommend purchasing for every square metre of Decking one Structural Composite Joist and should be spaced no more than 400mm apart so that your base is as strong and reliable as possible. For more information on how to install Joists correctly, please follow our installation guides.
