Slate Dry Verge Trim (T2)

Kytun Performance Plus Slate Dry Verge Trim (T2) can be used with natural or man-made double lap slates. This system permanently secures full & half-width slates along the verge edge whilst protecting from wind uplift and driving rain ingress in accordance with BS5534:2014+A2:2018. Manufactured using high grade pre-primed polyester coated aluminium. Alternative to the “slate-and-a-half” requirement, it provides a neat, continuous and totally weatherproof finish to the gable which requires no maintenance once fitted.

The design helps protect the edge of the roof from the elements and eliminates the possibility of lifting and damage to the roof underlay. No mortar or timber guides are required. It can be bespoke manufactured to virtually any profile to suit individual requirements.

All our bespoke dry verge is manufactured from 0.5mm high grade Aluminium.

Features & Benefits

- Permanently secures half width slates as narrow as 125mm at the verge edge.
- Eliminates the need for “slate & a half” along the verge edge
- BRE tested and proven to resist at least 10x any anticipated wind load force anywhere in the UK or Ireland.
- Provides full driving rain protection as demonstrated by independent BRE testing.
- Patented ‘Drip System’ which allows for drainage of rainwater directly into the eaves gutter.
- Will not discharge water on to the gable end wall
- Extremely easy and quick to install.
- Requires no maintenance once installed.
- Can be fully customised.
- 30yr aluminium durability warranty and 20yr colour warranty

Technical Details

Product Code	C02/C02N
