DIMENSIONS AND WEIGHTS

WIDTH

Whilst the boards can be manufactured to any standard plywood board size the resultant weight can be significant. Consequently a maximum width of 600mm is recommended. Sizes of less than 600mm can be produced as a special.

HEIGHT

Heights up to 3000mm can be manufactured with the most common being 2400mm.

THICKNESS AND WEIGHTS

The table opposite indicates the nominal weight and thickness of 4mm and 25mm plywood board.

STORAGE AND HANDLING TIPS

Lead-lined boards are supplied on a wooden pallet system. Pallets should be moved using a fork lift truck or hydraulic trolley.

When manually handling lead-lined boards, consider the correct manual handling technique to limit risk. Lead is heavy – ensure you have help to lift into position.

Lead-lined boards are not suitable to be used as a platform or deck. They will not support body weight and therefore it is important that installers use an independent support mechanism.

Lead is not covered by COSHH (control of substances hazardous to health) and handling lead-lined boards is perfectly safe – but we do recommend you take certain precautions:

Wear protective gloves when handling the lead sheet

Wash your hands thoroughly as soon as possible after you have finished

Don't eat, drink or smoke until you've washed your hands

Lead-lined boards should be stored in dry flat conditions.
