

TECHNICAL SPECIFICATION

Solar Speed C Clips

SKU: WM175

Product Description

Solar Speed C Clips are non-invasive fixing clips designed for fast, secure installation of solar panel bird-proofing systems. Made from durable, UV-stable plastic, they snap directly onto the solar panel frame without drilling, adhesives, or specialist tools. This protects the panel warranty while delivering a clean, professional finish.

Engineered for compatibility with SolarFix Solar Panel Bird Mesh and Solar Guard Lite Bird Spikes, the clips hold mesh or spike bases firmly in place to prevent birds from nesting beneath solar arrays. Their push-fit design speeds up installation time, and the clips can be removed for system maintenance without damaging the frame.

Available in multiple depths (30 mm, 35 mm, 40 mm) and two colours (black or clear), they blend discreetly with most panel frames and rooflines. Pack sizes of 75 or 150 support both small domestic installs and large commercial arrays.

Key Features

Non-invasive fixing - No drilling into panel frame.

Fast installation - Simple push-fit design.

Warranty-safe - Does not compromise panel integrity.

UV-resistant - Built for long-term outdoor exposure.

Discreet appearance - Black or clear options.

Flexible system - Compatible with mesh and spike bird-proofing.

Service-friendly - Removable for panel access proofing.

Typical Applications

Use: Attaching solar panel bird mesh or bird spikes to panel frames

Purpose: Prevent birds nesting/roosting under solar panels; protect cabling and panel underside

Environment: Residential and commercial rooftop solar PV systems
